Work Experience

Assistant Manager – Data Analyst Ranchers (Zakori Group Project)

- Power BI dashboard development connected to SQL databases containing 11M+ records
- SAP inventory reporting and operational analytics
- Excel + VBA automation of reporting workflows
- PDF → SAP sales automation system (16 branches, daily reporting)
- Inventory variance tracking and reconciliation system
- SQL-based reporting and data extraction
- KPI dashboards and business reporting

Freelance Data Analyst (Project Based)

- Delivered Excel-based reporting and automation solutions for small business clients.
- Developed customized dashboards and reporting templates for sales and operational tracking.
- Performed data cleaning and analysis to support business decision-making and reporting needs.
- Built automated Excel workflows to reduce manual data processing and improve reporting efficiency.

Projects

Enterprise BI Dashboard (Power BI)

Tools: Power BI, SQL, Excel

- Developed Power BI dashboards connected to SQL databases with 11M+ records.
- Designed KPI dashboards for sales, inventory, and operational performance tracking.
- Configured data connections and optimized reporting performance for large datasets.
- Published dashboards via Power BI Service for management reporting.

SAP Sales Automation System (VBA + Excel)

Tools: Excel, VBA, SAP ERP

- Automated daily sales processing across 16 branches using Excel VBA.
- Converted PDF-based sales reports into structured Excel data automatically.
- Generated SAP-ready tab-delimited files for daily uploads.
- Implemented validation checks to detect data and date mismatches.
- Reduced manual reporting workload significantly through automation.

Tableau Storytelling Dashboard

Tools: Tableau, SQL, Excel

- Built interactive Tableau dashboard focused on business storytelling and KPI analysis.
- Designed visual reports around key business questions for decision-making.
- Transformed operational data into clear visual insights for management.
- Applied data visualization best practices to improve clarity and usability.

Work Experience

Head of Department – Computer Science | 10 Years

- Developed Excel and VBA-based automated reporting systems for tracking student and departmental performance data.
- Designed structured performance tracking and reporting systems to support data-driven decision-making at departmental level.
- Conducted training sessions on Excel, programming, and data analysis tools to improve technical and analytical skills of staff and students.
- Led process improvement initiatives by automating administrative and reporting workflows using Excel and scripting tools.
- Integrated basic data analysis and reporting practices into academic workflows to improve efficiency and monitoring.

Education

Msc (CS) | 2015

Quaid-i-Azam University

Language

- English
- Urdu

Projects

Inventory & Variance Analysis System

Tools: SAP ERP, Excel, Google Sheets

- Built variance tracking system to monitor sales orders vs deliveries across branches.
- Performed monthly inventory reconciliation using SAP and Excel.
- Identified and reported stock variances for correction before month-end closing.
- Developed Excel-based food cost and profit margin analysis model.

Customer Behavior Analysis

Tools: SQL, Excel, Python

- Extracted and analyzed customer data using SQL for behavioral insights.
- Cleaned datasets using Python (Pandas) for reporting accuracy.
- Created Pivot Table reports for customer segmentation analysis.
- Delivered insights on purchasing trends and customer behavior.

Freelancing Courses

Freelancing Course – DigiSkills (2021)

- Learned fundamentals of client communication, project management, and freelancing workflow practices.

Awards & Recognition

- **Certificate of Excellence** – Best Coordinator (APSACS, 2023–24)
- **Certificate of Participation**– Digital Safar Program (Google partnership) 2024
